INTENDED USE
The KardiaMobile System is intended to record, store and transfer single-channel electrocardiogram (ECG) rhythms. The KardiaMobile System also displays ECG rhythms and output of ECG analysis from AliveCor’s KardiaAI platform including detecting the presence of normal sinus rhythm, atrial fibrillation, bradycardia, tachycardia, and others. The KardiaMobile System is intended for use by healthcare professionals, patients with known or suspected heart conditions and health conscious individuals. The device has not been tested and is not intended for pediatric use.

• While holding the phone upright (camera at top), slide KardiaMobile Hardware into the attachment plate so that the logo is pointing to the right “>”.

NOTE: KardiaMobile Hardware may be used up to a distance of 30 cm (1 ft.) from the smartphone or tablet. You have the option of adhering it to the phone.

• Rest your arms on a flat surface. Remain still with your fingers on the electrodes for 30 sec.

Do not take a recording if the electrodes are dirty. Clean them first.

• Tap the Kardia app on your phone to open the application.

• Rest two or more fingers on KardiaMobile Hardware; your right hand should contact the sensor (electrode) closest to the bottom of the smartphone, and your left hand should contact the electrode closest to the top of the smartphone.

USING KARDIAMOBILE
1. Attach KardiaMobile Hardware to Your Phone (Optional)
• Remove KardiaMobile Hardware from the box.

   NOTE: KardiaMobile does not require calibration prior to use.

   • If you choose to attach KardiaMobile Hardware to the phone, adhere the optional attachment plate to the back of the phone.

   NOTE: If the device is attached to your phone remove it prior to wireless charging the phone. DO NOT place the device on top of your phone while wirelessly charging the phone.

2. Download Kardia App & Create An Account
• On your compatible iOS or Android Phone (www.alivecor.com/compatibility), download the Kardia app from the App Store or Google Play store.

• Open the Kardia app and follow the onscreen instructions to create an account.

3. Recording Your First ECG
Do not use KardiaMobile System while charging your phone.

Do not take a recording while driving or during physical activity.

4. ECG Analysis
After ECG recording is complete, the ECG is analyzed to determine if it is at least 30 seconds long, if it is Normal, Unclassified, possible Atrial Fibrillation, Tachycardia or Bradycardia or if it is too noisy to interpret.

Presence of possible Atrial Fibrillation (AF) in your ECG results may present only potential findings. If you are experiencing any symptoms or have concerns, contact your physician.

Normal results mean your heart rate is between 50 and 100 beats per minute, and shape, timing and duration of each beat is considered normal.

Bradycardia results mean your heart rate is between 40 and 50 beats per minute, and shape, timing and duration of each beat is considered normal.

Tachycardia results mean your heart rate is between 100 and 140 beats per minute, and shape, timing and duration of each beat is considered normal.

An Unclassified message means the tracing is not Normal, possible AF, Tachycardia or Bradycardia and interference was not detected. An example of an Unclassified tracing is one where tachycardia is observed.

Unreadable ECG results determines that you didn’t have proper ECG recording for analysis. You may try to re-record your ECG.

ECG reports viewed at any magnification other than 100% may appear distorted and could lead to misdiagnosis.
**TRoubleshooting**

If you experience difficulties in operating your Kardia products, refer to the troubleshooting guide below or contact technical support at support@alivecor.com.

<tr>
<td>My KardiaMobile is not working</td>
<td><strong>Solution</strong>&lt;br&gt;<strong>Option 1:</strong> Ensure that the Kardia app has access to the phone’s microphone. On the iPhone, go to Settings and tap the Kardia app. Tap the microphone toggle.&lt;br&gt;<strong>Option 2:</strong> Change the battery. Remove KardiaMobile Hardware from the attachment plate (if applicable), and remove the battery door with a pen, pencil, or other similarly shaped object into the cutout next to the battery door to pop the battery off.</td>

**KardiaMobile Hardware Specifications**

**Battery:** Coin Cell<br>**Storage Conditions:** Original package under normal room temperature and humidity

**Electromagnetic & Other Interferences**

KardiaMobile Hardware has been tested and deemed in conformance with the relevant requirements in EN60601-1-2:2007 Class B for Electromagnetic Compatibility (EMC).
